

ENVIRONMENTAL POLICY

THE FUNDAMENTAL ORIENTATION OF OUR ENVIRONMENTAL POLICY IS:

1. We recognize and comply with legal requirements, requirements of local communities and requirements by other stakeholders that are binding for us.
2. We continuously reduce the percentage of material waste in the production.
3. We recover waste thermal energy from our production processes to heat the premises and sanitary water, thus contributing to a lower consumption of non-renewable natural resources.
4. In planning our production facilities and technological procedures, and in selecting equipment, we put equal emphasis on both environmental and business (economic) aspects.
5. In all our activities, we prevent any hazard to people, animals and plants, and any pollution to soil, water and air.
6. We use the lowest possible volume of water in performing our processes.
7. We continuously educate and train ourselves in the field of responsible environmental management.
8. Our contractors who perform the processes we have entrusted them with, carry them out in accordance with our environmental requirements.
9. We encourage product suppliers and service providers to use the best environmental management technologies and / or establish an environmental management system.
